

# Use the HTML Editor – D2L Brightspace

- Utilizing HTML files in D2L allows students to take advantage of tools such as ReadSpeaker

## Using the HTML Editor in D2L:

- In order for **Readspeaker** and screen readers to read the content on your pages in D2L we recommend putting your text based information in the HTML editors provided.

From the Module you wish to work in, Click the New Button, and Select Create a File. This will bring up the HTML editor.

When using this editor to create text, use the Format Tool to create headings that make the information searchable. We recommend Heading 1 for Titles, Heading 2 for Subtitles, and so on. This allows screen readers to easily search through the text and find the section the student is looking for.
